REPORT

TO

HIS EXCELLENCY JOHN DENTON PINKSTONE, VISCOUNT FRENCH,

&c., &c., &c.

LORD LIEUTENANT-GENERAL AND GENERAL GOVERNOR OF IRELAND.

I have the honour to submit for your Excellency's consideration my Fifty-fourth Annual Report, on Marriages, Births and Deaths, registered in Ireland during the year 1917.

GENERAL SUMMARY.

The marriage rate (4·86 marriages per 1,000 of the population) for the year 1917 is the lowest recorded for Ireland since 1900, being 0·27 per 1,000 under the low rate for 1916 and 0·38 under the average for the ten years, 1907–16.

The rate (19·9 per 1,000) represented by the births registered during the year, which is 1·2 per 1,000 under the rate for 1916, and 2·9 per 1,000 under the average for the decennium, 1907-16, is the lowest on record. The total number of births (86,370) registered in 1917 is 5,067 under the number for the preceding year, 12,436 under that for 1914, and 15,286 (or 15 per cent) below the average for the ten years, 1905–14.

The death rate from all causes during the year 1917 is 16·8 per 1,000 of the population, or 0·3 per 1,000 above that for the preceding year, but is 0·2 per 1,000 under the average for the ten years, 1907–16.

The mortality represented by the deaths from all forms of tuberculosis during the year is equivalent to 2·23 per 1,000 of the population, being 0·08 per 1,000 above that for 1916, but 0·05 per 1,000 under the average for the ten years, 1907–16.

The infant mortality rate (deaths of infants under one year of age per 1,000 births registered) for the year 1917 is 88, as compared with 83 in 1916, and an average of 92 for the ten years, 1907-16.

TABLE I.—Showing for each of the years 1907–1917 the estimated **Population*** ; the number of **Marriages, Births** and **Deaths** registered, and the number of **Emigrants** (Natives of Ireland) enumerated, with the rates per 1,000 of the estimated Population represented thereby ; and the averages for the ten years, 1907–1916.

Offences coming within the scope of the Acts administered by this Department reported during the financial year ended 31st March last, numbered 912. On careful inquiry into the circumstances, prosecutions were ordered to be instituted in 11 cases.

In 7 of these the parties were convicted and punished: one case was dismissed; and in the remaining three the proceedings were abandoned, the parties complying with the law.

Amongst the offences dealt with the following are included:—Neglect to register births; neglect to register deaths; neglect to furnish Certificate of Marriage; neglect of Coroner to furnish Certificate of the Finding of the Jury; neglect of Registrar to deliver to Superintendent Registrar Copies of his Register Books of Births, Deaths and Marriages; giving false information when registering births and deaths.

A sum of £90 was provided in the estimates to meet legal charges. During the year the total cost of the legal service of the Department was £24 3*s*. 2*d*., of which sum £14 12*s*. 8*d*. was paid for local professional assistance, and £7 12*s*. 0*d*. for mileage and allowances to the Registrars, the balance of the expenditure being mainly in respect of Court costs.

* The rates for the total of Ireland, the county boroughs of Dublin and Belfast and Londonderry county and county borough, are based on the estimated population in the middle of the respective years, those for the provinces and remaining counties on the population according to the Census of 1911. (See page 58).

MARRIAGES.

The number of marriages registered during the year was 21,073, being equivalent to a rate of 4·86 per 1,000 of the estimated population * ; this rate is 0·27 below that for the previous year, and 0·38 below the average for the ten years, 1907–1916.

Of the 21,073 marriages registered during last year, 15,049 were of Roman Catholics, as compared with 16,393 in 1916 ; according to the rites and ceremonies of the Church of Ireland 3,099 marriages were celebrated, as compared with 3,011 in the previous year ; 2,101, as compared with 2,049 in 1916, were in Presbyterian Meeting-houses ; 468, as against 441 in 1916, in " Registered Buildings " belonging to various religious denominations ; 334 by civil contract in the Registrars' offices, as against 338 in 1916 ; 5 were according to the usages of the Society of Friends, as against 3 in 1916 ; and 17, as compared with 10 in 1916, were according to the Jewish rites.

The marriages of Roman Catholics are equivalent to a rate of 4·70 per 1,000 of the estimated Roman Catholic population or 0·34 below the corresponding average rate for the preceding ten years, and the other marriages are equivalent to a rate of 5·31 per 1,000 of all persons other than Roman Catholics in the population, this rate being 0·48 under the corresponding average rate for the ten years, 1907-1916.

Of the 3,099 marriages celebrated according to the rites of the Church of Ireland, there were 89 by special licence, 2,648 by licence, 359 after the publication of banns ; and 3 marriages were celebrated on Registrars' certificates.

The number of Licences for Marriages issued by the Registrars during the year 1917 in Registered Buildings and in the Registrars' Offices was 741.

In the following summary the number of Marriage Licences issued by the Licensing Ministers of the several Presbyterian bodies is given.

Presbytery or Synod.	Number of Licensing Ministers on 31st December 1917.	Number of Registered Meeting-houses on 31st December, 1917.	Number of Licences issued.
1. General Assembly of the Presbyterian Church in Ireland	160	587	2,073
2. Remonstrant Synod of Ulster	10	20	35
3. Presbytery of Antrim	5	11	15
4. United Presbytery or Synod of Munster	2	2	—
5. Presbytery of Ireland (United Free Church of Scotland)	5	8	15
Total	182	628	2,138

In Ireland, there being no civil restrictions as to the time or place for celebrating marriages between Roman Catholics, a registration of the churches and chapels of the Roman Catholic Church is not necessary. With reference to other religious bodies, a record is kept of the places of Divine worship in which marriages may be lawfully solemnized otherwise than by special licence. On the 31st December, 1917, there were 1,486 churches and chapels of the Church of Ireland, 628 registered Presbyterian Meeting-houses, and 433 " Registered Buildings " belonging to various religious denominations.

The number of " Registered Buildings " belonging to the several religious bodies, as revised for the year 1917, is shown in the following list : —

Denominations	No. of Places of Worship.	Denominations.	No. of Places of Worship.	Denominations.	No. of Places of Worship.
Methodists	265	Salvation Army	9	" Undenominational " ...	2
Reformed Presbyterians ...	39	Seceders	8	Jews	1
Baptists	33	" The Catholic Apostolic Church "	2	" Holiness Movement " Church	1
Independents, or Congregationalists	30	Non-Subscribing Unitarians	1		—
Christian Brethren ...	32	Non-Subscribing Christians	1	Total	433
Moravians, or United Brethren	8	Welsh Presbyterians ...	1		

During the year 1917, of the 21,073 marriages registered, 5,996 were recorded in the first quarter, 4,887 in the second, 5,200 in the third, and 4,990 in the fourth quarter.

It will be ascertained from the figures given in the Abstract of Marriages, pages 12–13, that the marriages of bachelors with spinsters constituted 88·8 per cent. of the total; that those of widowers and spinsters were 6·4 per cent.; that the marriages of bachelors and widows were 3·2 per cent.; and that those of widowers and widows formed 1·6 per cent. of the total marriages. Thus, of the men married, 8·0 per cent. were widowers, and of the women 4·8 per cent. were widows, and in 11 instances, in every 100 marriages, one or both of the contracting parties had been in the married state before.

TABLE V.—Showing, by QUARTERLY PERIODS, the number of MARRIAGES registered in Ireland in each of the eleven years 1907-1917, and the average number for the ten years, 1907-1916, distinguishing the number of Roman Catholic Marriages registered under the 26 & 27 Vic., cap. 90, and of Protestant and other marriages under the 7 & 8 Vic., cap. 81.

In the age column of Marriage Registers or Certificates, the entry of "minor" or "full age," as the case may be, satisfies the requirements of the law in Ireland, so far as the ages of the contracting parties are concerned. In the year 1865, out of 30,802 marriages registered in Ireland, the ages of both parties were given in 13,910 cases, being equal to 45·2 per cent. of the total marriages in that year. In 1917 the number of instances in which *both parties* furnished their ages was 4,404,* equivalent to a rate of 20·9 per cent. of the total marriages recorded. Of those married in 1917 in Ireland 22·6 per cent. of the husbands and 23·7 per cent. of the wives made definite statements of their age, the corresponding figures for England and Wales for 1916 being 99·3 and 99·2 respectively.

During the year, 443, or 2·10 per cent. of the men married, were under age; and of the women married 1,631, or 7·74 per cent., were minors.

The proportion of husbands who married under age in 1917 was as follows for each province:—Ulster, 2·56 per cent. of marriages; Leinster, 2·25 per cent.; Munster, 1·73 per cent.; and Connaught, 0·75 per cent.

The corresponding proportions for wives were—Ulster, 9·34 per cent.; Leinster, 7·91; Munster, 6·56; and Connaught, 3·69 per cent.

It may be stated that in Ireland the percentage of persons married who were under age is much below the corresponding percentages in England and Scotland.

* In 957 instances the age at marriage was stated by only one of the contracting parties, viz., the cases of 364 men and 593 women married.

A rough test of the progress of elementary education in Ireland is afforded by the signatures of the contracting parties in the marriage registers or certificates. In the year 1917 there were 20,099 or 95·4 per cent., of the husbands, and 20,392, or 96·8 per cent., of the wives, who wrote their names, and the remainder signed by "mark," as against 20,705, or 92·0 per cent., of the husbands, and 21,164 or 94·0 per cent., of the wives, in the year 1907.

During the year 1917, 96·6 per cent. of the men married in the province of Munster wrote their names; 96·3 per cent. in Leinster; 94·7 per cent. in Ulster, and 93·0 per cent. in Connaught; and, among women, the percentages were as follows:—Munster, 97·6; Leinster, 97·1; Connaught, 96·5.; and Ulster, 96·1.

In 200 cases both of the persons married signed the register by "mark" and the register was thus signed by either the husband or the wife in 1,255 cases, so that in 1,455 cases, or 6·9 per cent. of the total number of marriages, one or both of the parties attested the signature by "mark"; and in 19,618 marriages, or 93·1 per cent., *both* parties wrote their names.

The following table gives for Ireland in each of the eleven years, 1907-1917, the proportion of persons married who wrote their names in the registers or certificates; the proportion of minors married; of widowers; and of widows:—

TABLE VI.—Showing, as regards the **Marriages** in Ireland during the years 1907–1917, the proportion per cent. of Persons who **signed their names,** of Persons **not of Full Age,** and of **Re-Marriages.**

Years.	Signed their Names in writing.		Persons not of Full Age.		Re-marriages. Widowers.	Re-marriages. Widows.
	Of 100 Men Married.	Of 100 Women Married.	Of 100 Men Married.	Of 100 Women Married.	Of 100 Men Married.	Of 100 Women Married.
1907 ...	92·0	94·0	1·44	5·22	8·37	3·97
1908 ...	92·0	94·5	1·66	6·38	8·58	4·03
1909 ...	93·5	95·0	1·67	6·84	8·07	3·89
1910 ...	93·5	95·3	1·51	6·28	7·92	3·93
1911 ...	93·9	96·0	1·23	5·31	8·06	3·32
1912 ...	94·3	96·2	1·75	6·38	8·23	4·07
1913 ...	94·2	96·5	1·89	6·91	7·90	4·13
1914 ...	94·6	96·4	1·63	6·24	7·95	4·01
1915 ...	95·3	96·6	1·95	6·81	7·37	3·82
1916 ...	95·2	97·1	1·83	6·58	7·78	4·34
1917 ...	95·4	96·8	2·10	7·74	8·04	4·84

In the province of Leinster, during the year 1917, as may be seen in Table III., the marriage rate was 5·3 per 1,000 of the population, according to the Census of 1911; the rate in Ulster was 5·2 per 1,000; in Munster it was 4·5 per 1,000; and in Connaught 3·5 per 1,000.

BIRTHS.

The number of births registered during the year 1917 amounted to 86,370—44,277 boys and 42,093 girls—the ratio to the estimated population being 19·9 per 1,000, which is 2·9 below the average rate per 1,000 for the ten years, 1907-1916.

The total births in 1916 numbered 91,437, in 1915 they were 95,583 and in 1914 they amounted to 98,806, the average for the ten years, 1905–14, being 101,656.

The proportion of male infants born alive in 1916 was 106·5 to every 100 females, and in 1917 it was 105·2, as compared with 105·4 males to every 100 females born alive during the five years, 1911–15.

Of the 86,370 births registered in Ireland during the year, 83,682, or 96·9 per cent., were legitimate, and 2,688, or 3·1 per cent., were illegitimate, the latter being 0·1 above the percentage for the preceding year. As regards illegitimacy Ireland compares favourably with most other countries.

The male children born in wedlock numbered 42,901, and the female 40,781, or 105·2 of the former to every 100 of the latter; of the illegitimate children, 1,376 were males, and 1,312 females, being 104·9 boys to 100 girls.

Of the children born in Ulster, 4·0 per cent. were illegitimate; in Leinster, the percentage was 3·6; in Munster, 2·6; and in Connaught, 0·7; the corresponding percentages for the preceding year being:—for Ulster, 3·9; for Leinster, 3·1; for Munster, 2·7; and for Connaught, 0·7.

In the provinces the rates represented by the total births registered during the year 1917 were as follows:—Leinster, 19·8 per 1,000 of the population in 1911; Munster, 19·2; Ulster, 19·9; and Connaught, 19·7. [See Table III.].

Of the total births, 52·9 per cent. were registered in the first six months of the year (181 days), and 47·1 per cent. in the second six months of the year (184 days).

The total number of births registered in the first quarter of the year was 22,188; in the second, 23,536; in the third, 21,079; and in the fourth, 19,567.

Multiple Births.

During the year 1917 there were 1,007 twin births and 10 triplet births. The twin births were 1·17 per cent. of the total births, 1·19 per cent. of the single births, and 1·18 per cent. of the total mothers.

In the year 1916 there were 1,235 twin births and 11 triplet births, the twin births representing 1·35 per cent. of the total births, 1·39 per cent. of the single births, and 1·37 per cent. of the total mothers.

DEATHS.

There were 72,724 deaths registered in Ireland during the year 1917, equivalent to 16·8 per 1,000 of the population estimated to the middle of the year. The deaths of males amounted to 36,288, and those of females to 36,436, the rate for males being 17·0 per 1,000, and for females 16·6 per 1,000.

The death-rate (16·8) is 0·3 above that for the year 1916, but 0·2 below the average rate for the ten years, 1907-1916.

For the provinces the recorded death-rates are as follows:—Connaught, 14·5; Munster, 16·1; Ulster, 16·8; and Leinster, 17·8 per 1,000 of the population, according to the Census of 1911. (See Table III.).

The deaths registered in the first half of the year, as observed in previous reports, generally outnumber those registered in the second half, the deaths registered in the six months of 1917, January to June inclusive, being equivalent to 60·9 per cent. of the total for the year, and those in the remaining six months to 39·1 per cent.

The annual rates represented by the deaths registered in each quarter are as follows:—23·3 per 1,000 of the population for the first quarter; 17·6 for the second; 12·5 for the third; and 13·7 for the fourth. The rate for the first quarter is 3·3 above, for the second 0·3 below, for the third 1·6 below, and for the fourth 2·2 below the average rate for the corresponding quarters in the ten years, 1907-1916.

As will be observed from the table on page 48, *of the* 72,724 *deaths registered during the year,* 3,564 *took place in Infirmaries and General and Special Hospitals;* 2,087 *in Public Lunatic Asylums;* 10,080 *in Workhouses and Workhouse Hospitals; and* 56,993 *were of persons who died "At their Own Homes," &c.*

Of the total deaths registered in Ireland, 4·9 per cent. occurred in "Infirmaries and General and Special Hospitals," the percentages for the four provinces varying from 0·7 in Connaught to 10·6 in Leinster. Deaths which took place in the Workhouses or Workhouse Hospitals constituted 13·9 per cent. of the total deaths, the respective percentages of these deaths for the provinces being—Leinster, 15·6; Munster, 18·4; Ulster, 10·8; and Connaught, 10·5.

TABLE VII.—Showing, by QUARTERLY PERIODS, the number of BIRTHS and DEATHS registered in Ireland in each of the eleven years, 1907–1917, and the average number for the ten years, 1907–1916

CAUSES OF DEATH.

The number of deaths in Ireland registered during the year 1917, in provinces, counties, and superintendent registrars' districts (poor law unions), and by causes, sexes, and ages, will be found in the abstracts beginning with page 36.

Table VIII., pages xiv.-xv., contains a summary of these deaths for each cause or group of causes, and also the corresponding number of deaths for each of the ten years preceding, with the average of these years.

Following a decrease of 4,760 deaths from all causes in 1916 as compared with 1915, the records for the year 1917 exhibit an increase of 1,333 in the total number of deaths as compared with 1916. The deaths from some of the principal causes in 1917, with the increases on the preceding year, are as follow :—

Bronchitis 6,564 deaths, increase 691 ; influenza 1,438, increase 424 ; pneumonia, 4,111, increase 410 ; tuberculosis 9,680, increase, 357 ; measles 504, increase 52 ; and typhus 46, increase 13.

Decreases on the deaths from the following causes are shown in 1917 when compared with 1916 :—Violence 1,788 deaths, decrease 477 ; whooping-cough 525, decrease 362 ; scarlet fever 116, decrease 171 ; diarrhœa and enteritis (children under 2 years) 1,006, decrease 135 ; heart disease, 7,980, decrease 102 ; cancer 3,839, decrease 99 ; diseases of liver 410, decrease 81 ; meningitis and encephalitis 542, decrease 80; puerperal septic diseases 167, decrease 45; diseases of the kidney 1,718, decrease 34 ; accidents of pregnancy and childbearing 259, decrease 33; and diphtheria 261, decrease 30.

ENTERIC FEVER.—The number of deaths from enteric fever during the year 1917 was 278, being slightly above the number registered in 1916 (276,) but 18 under the average (296) for the ten years, 1907-16. Of the 278 deaths, 127 were those of males, and 151 of females.

Thirty-eight of these deaths (32 appertaining to Belfast county borough) were registered in Lisburn union, 14 in Dublin South, 9 in Dublin North, 13 in Limerick, 10 in Cork, 8 deaths each in Belfast, Omagh and Tralee unions, 7 each in Newry and Sligo, 6 each in Ballymena and Callan, and 5 each in Ballinasloe, Castlebar, Killarney, Listowel, Loughrea, and Lurgan unions.

(Not included with the deaths from epidemic diseases are 10 deaths—7 of males and 3 of females—registered as from pyrexia—origin uncertain).

TYPHUS.—Deaths from this cause, which numbered 34 in 1912, 48 in 1913, 45 in 1914, 34 in 1915, and 33 in 1916, rose to 46 in 1917, the latter being one above the average (45) for the ten years, 1907-16. Twenty-nine of the 46 deaths were those of males and 17 were deaths of females, only 4 (2 of males and 2 of females) being deaths of children under 15 years of age.

In Sligo union 7 deaths from typhus were registered, in Lisburn 6 (all being those of persons admitted to Purdysburn Fever Hospital from Belfast county borough), 4 occurred in Killarney Union, 3 each in Belmullet, Castleblayney, Cork, Inishowen and Limerick, 2 each in Galway and Westport, and one each in Ballina, Granard, Kilkeel, Loughrea, Oughterard, Rathdrum, Rathkeale, Strabane, Waterford and Youghal unions.

SMALL-POX.—No death from this disease was recorded during the past 10 years, the last record of mortality relating to the year 1907.

MEASLES.—The fatalities from measles, numbering 504, were 52 above those for 1916, but 191 under the average for the ten years, 1907-16. The deaths in 1912 amounted to 813, in 1913 they were 920, in 1914 they reached a total of 1,003, in 1915 they were 595, and in 1916 the number fell to 452.

Of the 504 deaths, equivalent to a rate of 0·12 per 1,000 of the estimated population, 261 were those of males and 243 of females. About 90 per cent. of all the deaths from measles in 1917 were those of children under 5 years of age.

In the following unions 6 or more deaths were registered :—Dublin South (128), Dublin North (94), Belfast (101), Limerick (30), Lurgan (20), Rathdown (15), Dingle (10), Enniscorthy (10), Cavan (9), Kilkenny (9), Kilmallock (8), and Ardee (6).

SCARLET FEVER.—There was a low mortality from this disease during the year 1917, only 116 deaths (60 of males and 56 of females) having been registered. This number is 171 under that for 1916 and 149 under the average (265) for the ten years 1907-16 ; it is also the lowest number recorded since the year 1908, during which year only 72 deaths from scarlet fever were registered.

Of the 116 deaths, 14 occurred in Lisburn union, 11 of the latter appertaining to Belfast county borough ; 11 were registered in Londonderry union, 9 in Ballina, 6 in Dublin South, one in Dublin North, 5 each in Mallow and Monaghan, and 4 in Armagh union.

WHOOPING-COUGH.—The mortality from this disease in 1917 is the lowest recorded for Ireland, the number of deaths being 525, affording a rate of 0·12 per 1,000 of the population. The deaths of males numbered 232 and of females 293, and of the 232 deaths of males, 216, or 93 per cent., were those of children under 5 years of age and of the 293 deaths of females, 269, or 92 per cent., occurred at this age-period.

Sixty-five deaths occurred in Dublin South union, 13 in Dublin North, 62 in Belfast, 20 in Armagh, 15 each in Abbeyleix, Banbridge, and Cork, 12 in Lismore, 11 each in Dungarvan, Tralee and Wexford, and 10 in Tipperary union.

TABLE VIII.—Showing (1) the Number of Deaths from All Causes; from some during each of the eleven years, 1907–1917, with the Average Annual Number Population represented by the number of deaths from these causes, and the

* Per cent. of Total Deaths.

DIPHTHERIA.—The records for 1917 show a very low mortality from diphtheria, the number of deaths being 261, or 30 under the number (291) for the preceding year and 76 under the average (337) for the ten years, 1907-16. The deaths of males in 1917 numbered 130 and of females 131.

Five or more deaths occurred in the following unions:—Dublin South (32 ; Dublin North (6), Lisburn (17—of these 15 appertained to Belfast county borough , Belfast (10), Castlebar (8), Ballina (7), Listowel (7), Lurgan (6), Dungarvan (5), Galway (5), Gort (5), Inishowen (5), Larne (5), Middleton (5), and Monaghan (5).

Deaths from membranous laryngitis and croup numbered 77 (46 being those of males and 31 of females), as against 60 (30 of males and 30 of females) in 1916. These deaths, as the result of supplementary inquiries, were stated to be non-diphtheritic, or further information was not forthcoming.

INFLUENZA.—The fatalities from this disease in 1917 numbered 1,438, affording a rate of 0·33 per 1,000 of the estimated population. These deaths, comprising 681 of males and 757 of females, are 424 above the number (1,014) recorded in 1916 and 176 above the average (1,262) for the ten years, 1907-16.

The deaths from influenza in the province of Leinster during the year 1917 were equivalent to a rate of 0·29 per 1,000 of the population, according to the Census of 1911 ; in Munster the rate was 0·24 per 1,000 ; in Ulster it was 0·41 per 1,000 ; and in Connaught the mortality was 0·34 per 1,000 of the population of the province.

The following shows the mortality from this disease by county areas, arranged in order from lowest to highest :—Dublin county borough, 0·11 per 1,000 of population ; Belfast county borough, 0·11 ; Clare county, 0·12 ; King's county, 0·16 ; Louth, 0·16 ; Kerry, 0·16 ; Queen's County, 0·20 ; Wicklow, 0·20 ; Mayo, 0·22 ; Wexford, 0·22 ; Cork county and county borough, 0·23 ; Kildare county, 0·26 ; Galway, 0·27 ; Limerick county and county borough, 0·29 ; Dublin county, 0·30 ; Tipperary S.R., 0·30 ; Waterford county and county borough, 0·32 ; Antrim county, 0·34 ; Fermanagh, 0·36 ; Roscommon, 0·37 ; Meath, 0·41 ; Tipperary N.R., 0·41 ; Armagh, 0·42 ; Down, 0·42 ; Leitrim, 0·42 ; Cavan, 0·45 ; Westmeath, 0 52 ; Monaghan, 0·53 ; Kilkenny, 0·57 ; Londonderry county and county borough, 0·60 ; Tyrone, 0·60 ; Sligo, 0·65 ; Longford, 0·71 ; Donegal, 0·80 ; and Carlow, 0·91.

Of 681 deaths of males from influenza, 461 (or 68 per cent,) and of 757 deaths of females, 569 (or 75 per cent.) were those of persons aged 55 years or upwards.

DYSENTERY.—Deaths from this disease number 19, as compared with 20 for the year 1916, and an average of 22 for the ten years, 1907-16.

DIARRHŒA AND ENTERITIS (Deaths of children under 2 years).—The number of deaths under this heading, amounting to 897 in 1912, 1,992 in 1913, 1,424 in 1914, 1,199 in 1915, and 1,141 in 1916, fell to 1,006 (of boys 550, and of girls 456) in 1917, or 359 under the average (1,365) for the ten years, 1907-16.

In the following unions 10 or more deaths of children from diarrhœa and enteritis occurred :—Belfast (188), Dublin North (179), Dublin South (156), Cork (56), Londonderry (26), Rathdown (22), Waterford (14), Killarney (11), Listowel (11), Tralee (11), Limerick (10), Lurgan (10), and Thurles (10).

It will be noted that the deaths in the unions containing the six county boroughs (the inhabitants of these unions constituting only 26 per cent. of the total population of the country, according to the Census of 1911) numbered 629, or 63 per cent. of the deaths of children from diarrhœa and enteritis in Ireland, as compared with 731 such deaths, or 64 per cent. of the total, in 1916.

OTHER EPIDEMIC DISEASES.—There were 4 deaths from varicella, 5 from mumps, and 2 from German measles in 1917, as compared with 5 from varicella. 2 from mumps and 4 from German measles in 1916.

SYPHILIS.—The deaths from syphilis in 1917 numbered 81, 46 being those of males and 35 of females, as against 71 (of males 44, and of females 27) in 1916. Of the 81 deaths in 1917, 46 (23 of males and 23 of females) were those of infants under one year of age.

Thirty-eight persons (36 males and 2 females) died from locomotor ataxy, 86 (78 males and 8 females) from general paralysis of the insane, and 33 (24 males and 9 females) from aneurysm.

In 1916 the number of deaths from locomotor ataxy was 45, from general paralysis of the insane 95, and from aneurysm 37.

The abstracts, commencing on page 36, give particulars of these causes of death as regards ages, etc.

ERYSIPELAS.—To erysipelas 45 deaths (of males 21 and of females 24) were attributed, as compared with 59 (27 of males and 32 of females) in 1916.

PYÆMIA, SEPTICÆMIA.—The fatal cases returned under this heading amounted to 101, and comprise 10 deaths from pyæmia and 91 from septicæmia, as compared with 24 from pyæmia and 108 from septicæmia in 1916.

Of the 101 deaths in 1917, 60 were those of males and 41 of females.

There was no mortality from vaccinia recorded during the year 1917.

TUBERCULOSIS.

Deaths from all forms of tuberculous disease registered in Ireland during the year 1917 numbered 9,680, being equivalent to 2·23 in every 1,000 of the estimated population. This number is 357 (or 3·8 per cent.) in excess of that recorded for 1916, but it is 316 (or 3·2 per cent.) under the average (9,996) for the decennium 1907-16. As may be observed from the subjoined table the mortality from tuberculosis in 1917 is higher than that for any year since 1910, during which 10,016 deaths were registered.

Of the 9,680 deaths in 1917, 4,689 were those of males and 4,991 of females, the number of deaths among the males being only 12 above that for the preceding year, while the deaths of females accounted for an increase of 345, in comparison with 1916. Thus the increase in the total deaths from tuberculous disease in Ireland during the year under review is almost entirely due to the increased mortality among the female population.

In England and Wales the rate for tuberculous disease in 1917 among the estimated civil population was 1·62 per 1,000; in Scotland the rate per 1,000 of the estimated total population of that country was 1·57, as compared with 2·23 per 1,000 of the estimated population of Ireland.

A comparison of the mortality from tuberculosis in Ireland in 1917 with the ten years preceding is afforded by the following table:—

Year.	Males.		Females.		Total.		Annual Increase.		Annual Decrease.	
	Number of Deaths.	Rate per 1,000 of the Male population.	Number of Deaths.	Rate per 1,000 of the Female population.	Number of Deaths.	Rate per 1,000 of the population.	Number.	Per cent.	Number.	Per cent.

* Decrease in 1916 as compared with 1907.

Deaths from tuberculosis registered in the province of Leinster during the year 1917 numbered 2,994, being 53 above the number for 1916; in Munster they were 2,249, or 124 in excess; in Ulster they numbered 3,498, or 155 in excess; and in the province of Connaught the number amounted to 939, being 25 above that recorded in 1916.

The following county and county borough areas show increases in 1917 when compared with the figures for 1916:—Dublin county borough, 1,071 deaths from tuberculosis, increase 4; Kildare county, 138 deaths, increase 4; King's county, 118 deaths, increase 3; Longford, 67 deaths, increase 9; Louth, 150 deaths, increase 46; Queen's county, 127 deaths, increase 20; Westmeath, 127 deaths, increase 22;

Wicklow county 142 deaths, increase 41 ; Cork county and county borough, 991 deaths, increase 80 ; Kerry county, 334 deaths, increase 54 ; Tipperary S.R., 197 deaths, increase 14 ; Waterford county and county borough, 180 deaths, increase 3 ; Armagh county, 261, increase 33 ; Belfast county borough, 1,201, increase 150 ; Londonderry county and county borough, 308, increase 19 ; Monaghan county, 98, increase 10 ; Tyrone, 252, increase 29 ; Leitrim, 81, increase 11 ; and Mayo, 296, increase 30.

In the following county areas decreases as compared with 1916 are shown :— Carlow county, 75 deaths in 1917, decrease one ; Dublin county, 535 deaths, decrease 42 ; Kilkenny, 118 deaths, decrease 15 ; Meath, 99 deaths, decrease 35 ; Wexford, 227 deaths, decrease 3 ; Clare, 137 deaths, decrease 21 ; Limerick county and county borough, 309 deaths, decrease 3 ; Tipperary N.R., 101 deaths, decrease 3 ; Donegal, 280 deaths, decrease 17 ; Down, 457 deaths, decrease 46 ; Fermanagh, 66 deaths, decrease 23 ; Galway, 328 deaths, decrease 7 ; and Roscommon, 109 deaths, decrease 9.

The deaths from tuberculous disease in Antrim (469), Cavan (106), and Sligo (125) show no change in comparison with 1916.

The Yearly Summaries of the Weekly Returns for 1917 show that the death rate from all forms of tuberculous disease per 1,000 of the population of the Dublin Registration Area by classes, according to the Census of 1911, was as follows :— "Professional and Independent Class," 1·43 per 1,000 in 1917, as compared with 0·96 in 1916 ; "Middle Class," 2·08, as compared with 1·96 in 1916 ; "Artizan Class and Petty Shopkeepers," 2·95 in 1917, as compared with 2·82 in 1916 ; and "General Service Class," 3·25 in 1917, as against 3·33 in 1916.

The 9,680 deaths from tuberculosis in Ireland in 1917 comprise 7,617 from pulmonary tuberculosis, 630 from tuberculous meningitis, 576 from tuberculosis of the peritoneum and intestines, and 857 from other forms of tuberculosis.

Pulmonary Tuberculosis.—Under this heading are included 4,439 deaths returned as from pulmonary tuberculosis, 2,733 as from phthisis, 365 as from tuberculosis (not otherwise defined), 45 as from acute phthisis, and 35 as from acute miliary tuberculosis. These deaths, numbering 7,617, and forming 79 per cent. of all the deaths from tuberculosis, represent a rate of 1·76 per 1,000 of the estimated population. As compared with 1916, the fatal cases of pulmonary tuberculosis in 1917 exhibit an increase of 275, but when compared with the average (7,737) a decrease of 120 is shown.

There were 3,692 deaths of males, representing a rate of 1·73 per 1,000 of the estimated male population and 3,925 of females, affording a rate of 1·79 per 1,000 of the estimated number of females in the population, the rates among the male and female population in 1916 being 1·72 and 1·67 respectively.

Of the 7,617 deaths in 1917 from pulmonary tuberculosis, 5,426, or 71·2 per cent., were those of persons aged 15 and under 45 years, 648, or 8·5 per cent., were those of children under 15 years of age, and 1,543, or 20·3 per cent., were deaths of persons 45 years of age and upwards.

Deaths from pulmonary tuberculosis of children under 5 years of age numbered 167, or 0·39 per 1,000 of the population, at this age-period ; between 5 and 10 years of age the number was 154, or 0·36 per 1,000 ; between 10 and 15 years it was 327, or 0·78 per 1,000 ; deaths at the age-period 15 and under 20 numbered 914, or 2·19 per 1,000 ; at 20 years and under 25 the number was 1,147, affording a rate of 3·09 per 1,000 ; at 25-35 years the deaths numbered 1,901, or 3·02 per 1,000 ; at 35-45 they were 1,464, or 2·76 per 1,000 ; at the age-period 45-55 the number was 918, or 2·36 per 1,000 ; at 55-65 it was 450, or 1·61 per 1,000 ; at 65-75 the deaths numbered 153, or 0·49 per 1,000 ; and deaths at ages 75 years and upwards were 22, being equivalent to a rate of 0·18 per 1,000 of the population at these ages.

Deaths from pulmonary tuberculosis in the province of Leinster amounted to 2,330, affording a rate of 2·01 per 1,000 of the population of the province according to the Census of 1911, the number of deaths and rate per 1,000 in 1916, being 2,292 and 1·97 respectively.

In the province of Munster the deaths in 1917 numbered 1,825 and the rate per 1,000 of the population represented thereby was 1·76 ; in 1916 the deaths were 1,728 and the rate 1·67 per 1,000.

The number of deaths registered in the province of Ulster during the year 1917 was 2,660, or 1·68 per 1,000 of the population, as against 2,551 deaths in 1916, equivalent to 1·61 per 1,000 of the population.

During the year under review the fatal cases of pulmonary tuberculosis in the province of Connaught numbered 802, being equal to a rate of 1·31 per 1,000 of the population, the deaths in 1916 numbering 771, or 1·26 per 1,000 of the population.

TUBERCULOUS MENINGITIS.—Deaths from tuberculous meningitis, which numbered 660 in 1911, 637 in 1912, 627 in 1913, 609 in 1914, 690 in 1915, and 668 in 1916, fell to 630 in 1917, the latter number, equivalent to a rate of 0·15 per 1,000 of the population, being 71 under the average for the ten years, 1907-16.

Of the 630 deaths, 308 were those of males, being equivalent to a rate of 0·14 per 1,000 of the male population, and 322 were deaths of females, the latter number affording a rate of 0·15 per 1,000 of the estimated number of females in the population.

Deaths from tuberculous meningitis of children under 5 years of age numbered 248 (of males 124 and of females 124), being 39·4 per cent. of the deaths from this disease at all ages and affording a rate of 0·58 per 1,000 of the estimated population at this age-period. Of the deaths in 1916 from tuberculous meningitis, 36·8 per cent. were those of children under 5 years of age, representing a rate of 0·57 per 1,000 of the population under 5 years of age.

ABDOMINAL TUBERCULOSIS.—Deaths from abdominal tuberculosis, which comprise 94 returned as from tabes mesenterica, 299 from tuberculous peritonitis, 99 from tuberculous enteritis, and 84 as from other forms of abdominal tuberculosis, numbered 576, being 83 above the number for the preceding year, and 91 above the average (485) for the 10 years, 1907-16.

Of the 576 deaths, 261 were those of males and 315 of females. Among the males 112 deaths (or 42·9 per cent.) and among the females 76 deaths (or 24·1 per cent.) were those of children under 5 years of age.

OTHER FORMS OF TUBERCULOUS DISEASE.—To this group 857 deaths were assigned, including 124 deaths from tuberculosis of the spinal column, 137 from tuberculosis of the joints, 10 from lupus, 7 from scrofula, 130 from tuberculosis of other organs, and 449 from disseminated tuberculosis. The 857 deaths in 1917, which are 37 above those recorded for 1916, comprise 428 deaths of males and 429 of females, and are equivalent to a rate of 0·20 per 1,000 of the population, as compared with 0·19 per 1,000 in 1916, 0·17 per 1,000 in 1915, 0·18 per 1,000 in 1914, 0·20 per 1,000 in 1913, and 0·20 per 1,000 of the population in 1912.

CANCER.—Included under this heading are 1,540 deaths returned as from carcinoma, 188 deaths as from sarcoma, and 2,111 deaths as from cancer, malignant disease (not otherwise defined), the total (3,839), being 99 under the number for 1916, but 178 above the average (3,661) for the ten years, 1907-16. Of the 3,839 deaths in 1917, those of males numbered 1,826, being equal to a rate of 0·85 per 1,000 of the male population, and deaths of females 2,013, a number affording a rate of 0·92 per 1,000 of the female population.

Particulars regarding deaths from cancer, showing ages, sexes, and the parts of the body affected by the disease, are shown in Table IX., page xxi.

Only 31 of the deaths from cancer among the males and 14 among the females were those of persons under 25 years of age. The mortality among males was highest at the age-period, 75 years and upwards, viz., 4·53 per 1,000 of the male population at these ages; the age-period, 65 and under 75 years, comes next with a rate of 3·82 per 1,000, followed by the age-period, 55 and under 65 years, the rate for which was 3·71 per 1000 of the male population at this age-period. Among the females the mortality from this cause at the age-period, 75 years and upwards, was 3·77 per 1,000 of the female population at these ages; for the age-period, 55 and under 65 years, the rate was 3·40 per 1,000, and for the age-period, 65 and under 75 years, the rate was 3·13 per 1,000 of the female population at these ages.

Of the 1,826 deaths of males, 1,302 or 71·3 per cent., were of persons aged 55 years and upwards, 466, or 25·5 per cent., between 35 and 55 years, and only 58, or 3·2 per cent., were deaths of persons under 35 years of age.

The 2,013 deaths of females include 1,275 deaths of persons aged 55 years and upwards, or 63·4 per cent.; 669, or 33·2 per cent., at the age-period 35 and under 55 years; and 69 deaths, or 3·4 per cent., were those of persons under 35 years of age.

Among deaths of males, there were during the year 502 deaths from cancer of the stomach, 156 of the intestine, 151 of the liver and gall bladder, 145 of the rectum, and 93 of the tongue, the aggregate of these deaths amounting to 1,047, or 57·3 per cent. of the total. In the cases of 401 deaths of females the seat of the disease was the stomach; in 230 cases it was the liver and gall bladder; in 196, the intestine; in 85, the rectum; and in 9 cases only was cancer of the tongue returned as the cause of death. These deaths of females number 921, or 45·8 per cent. of all deaths of females from cancer. Cancer of the breast among females caused 343 deaths, and cancer of the uterus, 244, the total (587), forming 29·2 per cent. of all the deaths of females from this disease. There were only 6 deaths of males from cancer of the breast.

TUMOURS (NON-MALIGNANT).—Tumours (not including those of the brain, uterus, or ovary), caused the deaths of 25 males and 26 females during the year 1917. In all these cases the tumours were not malignant, or further information concerning their nature was not available. The details regarding the parts affected were as follows:—

PARTS AFFECTED.	MALES.	FEMALES.	PARTS AFFECTED.	MALES.	FEMALES.
Larynx	1	1	Kidney	–	1
Lung	1	–	Bladder ...	3	–
Intestine	3	2	Prostate ...	2	–
Rectum	1	–	Breast		1
Liver	2	4	Face	1	–
Peritoneum ...	–	1	Nose	1	–
Neck	2	2	Abdomen ...	1	10
Mediastinum ...	2	–	Others, or not stated	4	3
Mesentery ...	1	–	Total ...	25	26
Spleen	–	1			

RHEUMATISM, &C.—There were 242 deaths (112 of males and 130 of females) from rheumatic fever (No. 47, International List); 453 (187 of males and 266 of females) from chronic rheumatism; 20 (of males 6, and of females 14) from osteo-arthritis; 9 deaths (5 of males and 4 of females) from rheumatic gout; and 5 deaths, 4 being those of males and one that of a female, from gout.

Deaths ascribed to rheumatic fever in the year 1916 amounted to 255; to chronic rheumatism, 394; to osteo-arthritis, 7; to rheumatic gout, 4; and to gout, 7.

DIABETES.—To this cause 379 deaths (208 of males and 171 of females) were ascribed, being 8 under the number for 1916 and equal to the average for the ten years, 1907-16.

OTHER GENERAL DISEASES.—There were 16 deaths from tetanus, one from anthrax (splenic fever), and one from beri-beri.

ALCOHOLISM.—Fifty-one deaths (47 of males and 4 of females) were assigned to alcoholism, as compared with 130, 102 and 94, respectively in the three preceding years.

There were 175 deaths classified to cirrhosis of the liver, those of males numbering 122 and of females 53. In 1914 there were 299, falling to 269 in 1915 and to 243 in 1916.

MENINGITIS.—There were 542 deaths from meningitis and encephalitis in 1917, being 80 under the number (622) in 1916, and 123 under the average (665) for the ten years, 1907-16. Of the 542 deaths, 283 were those of males and 259 of females.

CEREBRO-SPINAL FEVER.—Deaths attributed to cerebro-spinal fever in 1917 numbered 58 (of males 34, and of females 24), as compared with 16 in 1914, 141 in 1915 and 63 in 1916. Of the 58 deaths, 43 were those of persons under 25 years of age, 14 being those of children under 5 years of age.

POLIOMYELITIS.—To poliomyelitis, infantile paralysis, 30 deaths were ascribed, as compared with 47 in 1914, 24 in 1915, and 44 in 1916. Of the 30 deaths in 1917, 15 were those of males and 15 of females.

In the following statement details of the latter as regards age at death are given:—

—	All Ages.	Under 1 year.	1–	2–	3–	4–	5–10	10-15	15-20	20-25	25-35	35-45	45 years & upwards
Males ...	15	1	5	–	2	–	2	2	1	1	–	–	1
Females ...	15	2	3	2		3	3	2	–	–	–	–	–
Total ...	30	3	8	2	2	3	5	4	1	1	–	–	1

Locomotor Ataxy.—Deaths from this cause which numbered 31, 44 and 45, respectively, in the three preceding years were 38 (36 being deaths of males and 2 of females) in 1917.

General Paralysis of the Insane.—During the year there were 86 fatal cases of this disease, of which 78 were those of males and 8 of females, as against 103 in 1914, 83 in 1915, and 95 in 1916.

Epilepsy.—Deaths assigned to epilepsy in 1917 numbered 353 (of males 210 and of females 143), as compared with 260 in 1914, 333 in 1915, and 305 in 1916.

Convulsions.—To convulsions 963 deaths (of males 541 and of females 422) were ascribed, as compared with 1,119 in 1916. Of the 963 deaths, 800 (or 83 per cent.) were those of infants under one year of age constituting 11 per cent. of the deaths from all causes of infants under one year of age.

Cerebral Tumour.—Thirty-nine deaths (26 of males and 13 of females) were finally assigned to this cause, as against 53 in 1914, 23 in 1915, and 43 in 1916. Resulting from the supplementary inquiries as regards deaths certified as from cerebral tumour, 8 deaths were transferred to tuberculous meningitis, 2 to sarcoma, one to pulmonary tuberculosis, one to malignant tumour, one to syphilis, and one to osteoma of frontal bones.

Diseases of the Heart.—To this group 7,980 deaths, representing a rate of 1·84 per 1,000 of the population, were assigned, being 11 per cent. of the deaths from all causes registered in Ireland. The 7,980 deaths are 102 under those recorded in 1916 and 428 under the average (8,408) for the ten years, 1907-16.

Deaths of males in 1917 numbered 3,879 and of females 4,101, the total (7,980) including 7,712 from organic diseases of the heart (2,539 from valvular disease and chronic endocarditis, 237 from dilatation, 163 from fatty degeneration, 129 from cardiac dropsy, 13 from hypertrophy, and 4,631 from other organic diseases), 166 deaths under the heading, acute endocarditis (comprising 27 from acute myocarditis, 17 from infective endocarditis and 122 deaths from other acute endocarditis), 77 from angina pectoris, and 25 from pericarditis.

Laryngitis.—There were 81 deaths returned as from laryngitis, 16 from laryngismus stridulus, and 8 from other diseases of the larynx, as against 125, 15 and 2, respectively, in 1916.

Bronchitis.—The deaths of 6,564 persons (3,153 males and 3,411 females), affording a rate of 1·51 per 1,000 of the population, were ascribed to bronchitis (acute and chronic).

This number is 691 above that for 1916, but 404 under the average (6,968) for the ten years, 1907-16.

In 1912 deaths from bronchitis which numbered 6,696, were 6,576 in 1913, 6,009 in 1914, 7,206 in 1915, and 5,873 in 1916.

Nine per cent. of the deaths from all causes in 1917 were caused by bronchitis.

Pneumonia.—The number of deaths from pneumonia, which was 4,233 in 1912, fell to 3,948 in 1913, to 3,846 in 1914, rose to 4,330 in 1915, and fell to 3,701 in 1916, rose to 4,111 in 1917, this latter number being equivalent to a rate of 0·95 per 1,000 of the estimated population. The 4,111 deaths (of males 2,346 and of females 1,765), and comprising 1,526 from broncho-pneumonia, 431 from lobar pneumonia, and 2,154 from pneumonia (type not stated), are 410 above those recorded for 1916 and 45 above the average (4,066) for the ten years, 1907-16.

TABLE IX.—Showing the Deaths registered from Cancer* in Ireland during the year 1917, by Sexes, Ages, and parts affected.

* Including Carcinoma, Sarcoma and Cancer, Malignant Disease.

PLEURISY, EMPYEMA.—Deaths assigned to pleurisy in 1917 numbered 206 (of males, 123 and of females, 83), and include the deaths of 15 males and 4 females registered as from empyema, regarding which special inquiry either associated them with pleurisy or failed to elicit any information respecting the cause of empyema.

During the 14 years, 1904–17, there were registered in Ireland the deaths of 408 persons (294 males and 114 females) as from empyema. Resulting from the special inquiry as regards the 294 deaths of males, 83 were transferred to tuberculous disease, 30 to pneumonia (7 to lobar pneumonia, 6 to broncho-pneumonia, 2 to pleuro-pneumonia, and 15 to pneumonia, type not stated), 4 were assigned to injury, 3 to influenza, 2 each to enteric fever and hepatic abscess, and 9 to other causes. Thirty cases were stated to be associated with pleurisy.

The investigation into the 114 deaths of females resulted as follows :—35 were transferred to tuberculous disease, 13 to pneumonia (7 to lobar pneumonia, 2 to broncho-pneumonia, and 4 to pneumonia, type not stated), in 3 cases influenza was ascribed as the origin, in one enteric fever, and in 4 cases other causes were assigned. In 11 instances pleurisy was ascribed as the cause.

As regards 131 deaths of males, and 47 of females, the causes of death originating empyema could not be ascertained.

GASTRIC ULCER.—Deaths from this disease, which were 312, 297, and 291 respectively, in the three years, 1914-16, numbered 311 in 1917, the latter comprising 148 deaths of males and 163 of females. Of the 311 deaths, 60 per cent. were those of persons 35 and under 65 years of age.

DUODENAL ULCER.—To duodenal ulcer, 55 deaths (43 of males and 12 of females) were attributed, as against 52, 58 and 66 in the three preceding years.

APPENDICITIS, PERITYPHLITIS.—Under this heading 227 deaths (of males, 141 and of females, 86), were returned. In 1914 such deaths numbered 202, in 1915 they amounted to 213, and in 1916 they were 188.

CIRRHOSIS AND OTHER DISEASES OF THE LIVER.—During the year 1917, the deaths referred to cirrhosis of the liver numbered 175, and of these 122 were deaths of males and 53 of females, as compared with a total of 299 in 1914, 269 in 1915, and 243 in 1916. In 1917 there were 11 deaths from acute yellow atrophy, one from hydatid tumour, 44 from biliary calculi, and 179 from other diseases of the liver.

PERITONITIS.—Resulting from supplementary inquiries as regards deaths registered as from peritonitis, the deaths from this cause have been reduced to 80 (39 of males and 41 of females) for the year 1917, as compared with 80 in 1916, 77 in 1915, and 89 in 1914.

Of the total number of deaths (168) registered as from this condition, 88 were assigned to other causes, including 20 to appendicitis, 16 to tuberculous peritonitis, 7 each to duodenal ulcer and gastric ulcer, 6 to enteritis or other diseases of intestines, 6 to injury, 5 to intestinal obstruction, 5 to diseases of the female genital organs, 4 to malignant disease, 2 to childbearing, and 2 to food poison.

DISEASES OF THE KIDNEYS.—To this group 1,718 deaths, representing a rate of 0·40 per 1,000 of the population, were attributed, the deaths of males amounting to 987, and those of females to 731. Deaths from these causes numbered 1,720 in 1914, 1,662 in 1915, and 1,752 in 1916. The 1,718 deaths in 1917 are 34 under those recorded for 1916, but are 59 above the average for the ten years, 1907-1916. Included in the mortality for 1917 are 283 deaths from acute nephritis, 1,308 from chronic Bright's disease, 68 from uræmia, and 59 from other diseases of the kidneys.

DISEASES AND ACCIDENTS OF PREGNANCY AND CHILDBIRTH.—The total number of deaths returned as having been caused by or associated with pregnancy or child-bearing during the year 1917 was 477, comprising 167 from puerperal septic conditions, 259 from diseases and accidents of pregnancy or child-bearing; and 51 deaths not classed to pregnancy or child-bearing, but returned as associated therewith.

Table XA. gives this information in detail for the year 1917; Table XB. supplies a comparison of the mortality for 1917 with each of the ten preceding years; while Table XC. furnishes by provinces, counties and county boroughs the rates of mortality in the year 1917, in comparison with the average for the five preceding years, as regards puerperal septic diseases and diseases and accidents of pregnancy and child bearing.

TABLE XA.—Showing the number of deaths of women in Ireland in 1917 definitely returned as either caused by or associated with pregnancy or childbearing.*

From Table XB, it will be observed that the rate represented by the deaths from puerperal septic diseases and diseases and accidents of pregnancy and childbirth during the year 1917, viz., 4·93 per 1,000 births, is 0·33 per 1,000 below the average (5·26) for the preceding ten years. The rate (4·93 per 1,000 births) in 1917 comprises 1.93 from puerperal septic diseases, and 3·00 from diseases and accidents of pregnancy and childbirth, the former being 0·07 below, and the latter 0·26 below, the average for the preceding ten years.

As may be seen from Table Xc, the four provinces each show a decrease in 1917 in the mortality from puerperal septic diseases and diseases and accidents of pregnancy and childbirth as compared with the average for the five years preceding. The highest provincial rate is for Connaught both for 1917 and for the five years preceding, viz., 5·57 and 6·13 per 1,000 births. The lowest provincial rate is in Leinster, which was 4·05 per 1,000 births in 1917, as against an average of 5·02 per 1,000 for the five years, 1912–16.

With reference to several of the counties, the numbers upon which the rates for 1917 are based being small, caution should be exercised in the use of the mortality figures, except when taken in conjunction with those for the preceding five years.

During the five years, 1912–16, the mortality from puerperal septic diseases and diseases and accidents of pregnancy and childbirth was highest in the following counties :—

Monaghan (7·55 per 1,000 births) ; Leitrim (7·22) ; Longford (7·21) ; Tyrone (6·99) ; and Wexford (6·73).

The counties having the lowest average mortality (1912–16) were as follows :— Dublin county (2·91) ; Meath (4·38) ; Londonderry, (4·38) ; Antrim (4·66) ; and Clare, Waterford, and Fermanagh, 4·77 each.

For the county boroughs the average rates varied from 3·96 for Belfast to 6·38 for Londonderry, the mortality for Cork being 4·44 per 1,000 births, for Dublin, 4·63 ; for Waterford, 5·17 ; and for Limerick, 5·89.

The figures for the county boroughs relating to the year 1917, show that the rate for Dublin is the lowest, viz., 2·84 per 1,000 births, and Londonderry, the highest, with a rate of 11·14 per 1,000 ; the rate for Belfast is 4·30 ; for Waterford, 3·54 ; for Limerick, 3·57 ; and for Cork, 4·92 per 1,000.

The highest mortality in 1917 occurred in the following counties :—Sligo (9·19) ; Roscommon (8·31) ; Wexford (6·86) ; Armagh (6·86) ; and Westmeath and Fermanagh each 6·73 per 1,000.

The counties showing the lowest rates in 1917 were :—Down (2·15) ; Louth, (2·38) ; Leitrim (2·57) ; Wicklow (2·66) ; and Dublin (2·90).

VIOLENCE.—The deaths registered in Ireland during the year 1917, as having been caused by violence in its various forms numbered 1,788, in comparison with 2,265 in 1916, and an average of 1,920 for the ten years, 1907–1916.

The 1,788 deaths in 1917 comprise 36 cases of homicide, 98 of suicide, and 1,654 other deaths by violence, including accidental cases.

Among the latter are 410 (174 being those of children under 5 years of age) from burns or scalds ; 276 caused by drowning : 147 deaths caused by excessive cold, 36 by absorption of deleterious gases, and 26 by acute poisoning.

Of the 36 homicidal cases, 18 were deaths of males and 18 of females ; the 98 suicidal cases comprise 76 deaths of males and 22 of females ; and of the 1,654 other deaths by violence, 1,126 were those of males, and 528 of females.

Included in the other deaths by violence are 18 deaths of soldiers caused by wounds received in battle, and 40 deaths (35 of soldiers and 5 of civilians) resulting from wounds received during the Rebellion of Easter Week 1916.

The number of deaths caused by poisons or poisonous gases, whether industrial or otherwise, registered during the year 1917 was 50, the accidental cases numbering 39 and the suicidal 11, no death by poison homicidally administered having been reported.

Of the accidental cases 27 were those of males and 12 of females ; the suicidal cases included 4 deaths of males and 7 of females.

Among the 27 accidental deaths of males are 3 deaths caused by lead poisoning, 3 by food poisoning, 2 each by strychnine, cocaine, carbon monoxide and ptomaine poisoning, and one death each by veronal, gas, arsenic, alcohol, sulphuric acid, liquid ammonia, coal gas, laudanum, opium, and carbolic acid. Two deaths were caused by fire of wet turf in closed room.

Included in the 12 deaths of females are 2 caused by ptomaine poisoning, and one death each by gas, alcohol, methylated spirit, coal gas, opium, morphia, carbolic acid, mercurial poison, oxalic acid, and food poisoning.

Of the 4 cases of suicide in males, 2 were caused by coal gas, one by opium, and one was caused by an irritant poison ; and the 7 deaths of females who committed suicide by poison include 2 by strychnine poisoning, 2 by ammonia, and one each returned as having been caused by coal gas, gas, and oxalic acid.

Ill-defined Causes of Death.

The following terms, among others, should not be used where it is possible to employ a more definite nomenclature in describing the cause of death:—dropsy, syncope, sudden death, heart failure, atrophy, debility, marasmus, teething, pyrexia, and old age.

During the year 1917, the deaths assigned to old age numbered 13,227 (of males 6,121 and of females, 7,106). These include 68 deaths (36 of males, and 32 of females), of persons aged 70 years and upwards returned as from syncope, and the deaths at this age-period of 579 persons (271 males and 308 females) registered as from heart failure.

Uncertified Causes of Death.

Of the total deaths registered (72,724) during the year 1917, no less than 17,921, or 23·4 per cent., were returned as uncertified, the corresponding percentage for 1916 being 22·9, and the average for the preceding ten years, 23·3.

Inquests.

As returned by the Registrars during the year 1917, the number of inquests was 1,398, or one inquest in every 52 deaths registered.

AGES AT DEATH.

Deaths of children under 5 years of age during the year numbered 11,494, or 15·8 per cent. of all the deaths registered, the deaths of male children amounting to 6,239, or 17·2 per cent. of the total deaths of males, and the deaths of female children, 5,255, or 14·4 per cent. of the deaths of females at all ages.

There were 31,814 deaths of persons aged 65 years or upwards, being 43·7 per cent of the total deaths registered. Included therein are 26,430 deaths of persons aged 70 years or upwards, or 36·3 per cent. of all the deaths recorded during the year.

Among these deaths are 505 of persons aged 95 years or upwards, 245 being those of males, and 260 of females, including 115 deaths, comprising 49 of males, and 66 of females, whose ages at death were returned as 100 years or upwards.

The death rates per 1,000 of the population at each of the undermentioned age-periods, were as follows:—Under 5 years, 26·7 per 1,000; 5 and under 10 years, 3·0; 10 and under 15 years, 2·8; 15 and under 20 years, 4·4; 20 and under 25 years, 5·8; 25 and under 35 years, 6·5; 35 and under 45 years, 9·1; 45 and under 55 years, 15·4; 55 and under 65 years, 28·7; 65 and under 70 years, 37·4; 70 and under 75 years, 53·3; and at the age-period, 75 years and upwards, the rate was 140·2 per 1,000 of the estimated number living at this age-period.

INFANT MORTALITY.

There were registered in Ireland during the year 1917, the deaths of 7,583 infants under one year of age, which number is equivalent to 88 in every 1,000 births registered, as compared with 83 per 1,000 in 1916, and an average of 92 for the 10 years, 1907–16. The mortality rate for 1916 was the lowest recorded for Ireland.

The deaths of infants under one year old in 1917 include 4,255 males and 3,328 females, the former number being equal to 96 per 1,000 births of males, the latter affording a rate of 79 per 1,000 births of females. The corresponding infant mortality rates for 1916 were 90 and 77 respectively.

In 1917 the rate for deaths of infants under one year of age in England and Wales was 97 per 1,000 births, as compared with 91 per 1,000 in 1916, the respective rates for Scotland being 107 and 97 per 1,000 births registered.

In the following statement the infant mortality rates are given for Ireland in comparison with those for England and Wales and Scotland during each of the 54 years, 1864–1917.

Year.	Ireland.	England and Wales.	Scotland.	Year.	Ireland.	England and Wales.	Scotland.

Comparing the average for the first five years with the last, it would appear from the foregoing statement that the infant mortality for Ireland fell from 96 per 1,000 births during the years 1864-8 to 89 for the years 1913-17, for Scotland it fell from 122 to 110; and for England and Wales the rate fell from 156 to 102.

In the case of Ireland this reduction only amounted to 7·3 per cent., and as regards Scotland a decrease of 9·8 per cent. is shown, while for England and Wales the decrease in the rate of infant mortality is equivalent to 34·6 per cent.

Table XI. gives the infant mortality for the whole of Ireland in each of the ten years, 1908-17, by certain causes, and in the case of 1917, by age-periods and sexes.

From this table it will be seen that, in comparison with 1916, the mortality for 1917 in the majority of causes shows increases, the principal of which relate to the group of developmental and wasting diseases (increase 2·57 per 1,000), bronchitis (increase, 2·12), pneumonia (increase, 1·20), and tuberculous disease (increase, 0·49).

The principal decreases are observable in the mortality from whooping-cough (decrease 2·15 per 1,000), convulsions (decrease 0·51 per 1,000), and diarrhœal diseases (decrease 0·49 per 1,000).

Table XII. gives the infant mortality by causes, sexes, and age-periods, represented by deaths of infants *registered* during the year 1917 in the Registrars' districts containing towns of over 10,000 inhabitants — "Nineteen Town Districts."

The following is a summary of these particulars as compared with the remainder of the country and with Ireland as a whole, with corresponding figures for 1916 :—

AGES.	Infant Mortality, 1917—Deaths under one year per 1,000 Births, registered

The aggregate infant mortality rate for the "Nineteen Town Districts" in 1917 was 123·94 per 1,000 births registered, as compared with 120·91 in 1916. For the remainder of the country the rate in the former year was 72·20, as against 66·94 in 1916. Thus the rate for the town districts is 3·03 per 1,000, or 2·51 per cent. more than that for 1916, while the mortality among infants in the remainder of Ireland is 5·26 per 1,000, or 7·86 per cent., more than that which prevailed in the year 1916.

According to the Yearly Summaries of the Weekly Returns furnished by the Registrars, the infant mortality rates (corrected for births and deaths in institutions) for the "Nineteen Town Districts" in 1917, with the increase or decrease as compared with the average rate per 1,000 births for the five years preceding, were as follows:—Dublin Registration Area 152, decrease 6*; Belfast 130, decrease 3; Cork 109, decrease 11; Londonderry 95, decrease 9; Limerick 131, increase 16; Waterford 91, decrease 45; Galway 77, decrease 45; Dundalk 78, decrease 38; Lurgan 126, increase 30; Drogheda 86, increase 7; Lisburn 128, increase 4; Newry 101, decrease 11; Portadown 44, decrease 61; Wexford 95, decrease one; Ballymena 131, increase 18; Sligo 91, decrease 16; Kilkenny 69, decrease 14; Tralee 81, decrease 8; and Clonmel 78, decrease 28.

During the year 1917, the infant mortality rate for London was 103 per 1,000 births and in 1916, it was 89; the rate for Liverpool in 1917 was 114 per 1,000 births and in 1916, the infant mortality was 116; the respective infant mortality rates in 1917 and 1916 for Glasgow was 128 and 111; and for Edinburgh, 123 and 100.

Table XIII. affords a comparison of the rates of infant mortality per 1,000 births in 1917 with 1916, represented by the deaths of infants under one year of age as *registered* in each county and county borough in Ireland.

* As compared with 1915 and 1916 only in the case of Dublin; in all other cases the comparison of the figures for 1917 is made with those for the five years, 1912–16.

TABLE XI.—Showing for Ireland the Mortality, by certain causes, among infants under 12 months old, per 1,000 Births registered in the ten years 1908-1917, and by Sexes and Age-periods for the latter year.

Causes of Death.	Deaths of Infants under One Year per 1,000 Births registered.

EMIGRATION.

According to the returns furnished to this Department by the Royal Irish Constabulary and the Metropolitan Police, who acted as enumerators at the several Irish seaports, the number of emigrants (natives of Ireland) who left the ports of Ireland during the year 1917 was 2,111, of whom 838 were males and 1,273 were females. Of the total emigrants, 677 were natives of the province of Leinster, 78 of Munster, 1,248 of Ulster, and 108 of Connaught.

Of the total emigrants, 39·6 per cent. were under 15 years of age, 37·2 per cent. were between 15 and 35 years old, and 23·2 per cent. were 35 years or upwards.

PRICES OF PROVISIONS AND PAUPERISM.

The average price of Messrs. Boland's (Limited) 4 lb. loaf in Dublin in the year 1917 was $10\frac{3}{4}d.$, which was also the average price of Messrs. Johnston, Mooney, and O'Brien's (Limited), bread, delivered. In the year 1916 the average price for Messrs. Boland's was $9\frac{1}{4}d.$ and for Messrs. Johnston, Mooney, and O'Brien's, $9d.$ Oatmeal (1st quality) averaged $43s.$ $3d.$ per cwt. in Dublin, the average price for 1916 being $22s.$ $6d.$; the average price of potatoes in Dublin was $8s.$ $6\frac{1}{2}d.$ per cwt., as against $6s.$ $2\frac{3}{4}d.$ in 1916; and the average price of beef was $125s.$ $3d.$ per cwt., as compared with $97s.$ in 1916.

TABLE XIV.—AVERAGE PRICES in DUBLIN of BREAD, OATMEAL, POTATOES, and BEEF, during the years 1907–1917, and the AVERAGE NUMBER of PERSONS in IRELAND receiving IN-DOOR and OUT-DOOR RELIEF on Saturdays in those years; also the AVERAGE PRICES of PROVISIONS, and the AVERAGE NUMBER of PERSONS in RECEIPT of RELIEF during each quarter of the year 1917.

(*a*) Messrs. Boland's, Limited

(*b*) Messrs Johnston, Mooney, and O'Brien's (Limited) 4-lb loaf *delivered*; the price in Messrs. Johnston, Mooney and O'Brien's shops, exclusive of delivery, was $\frac{1}{2}d.$ per 4 lb. loaf lower.

(*c*) Not including those relieved by means of works devised for the relief of distress, viz.:—an average of 1,062 in First Quarter, 7,199 in Second Quarter, and 2,645 in Third Quarter of 1908.

NOTE.—*The average prices of Oatmeal, Potatoes, and Beef given in the above Table have been kindly supplied by the Department of Agriculture and Technical Instruction for Ireland, and the number of persons receiving In-door and Out-door Relief by the Local Government Board.*

It appears from the foregoing table that in the year 1907 the price of beef was lowest, when the average price was $55s.$ $9d.$ per cwt.; in the year 1907 bread was cheapest, when the average price (1st quality delivered) was $5\frac{3}{4}d.$ per 4 lb. loaf. Oatmeal (1st quality) was cheapest in 1911, in which year the average price was $13s.$ $8d.$ per cwt.; and potatoes in 1909, when the average price was $2s.$ $10d.$ per cwt. During the year 1917 the prices of provisions were highest, the average price of the 4 lb. loaf being $10\frac{3}{4}d.$ The average price of oatmeal (1st quality) was $43s.$ $3d.$ per cwt.; of potatoes, $8s.$ $6\frac{1}{2}d.$ per cwt., and of beef, $125s.$ $3d.$ per cwt.

Table XIV. also shows that the average number of workhouse inmates in Ireland on Saturdays during the year 1917 was 30,034, showing a decrease of 1,397 when compared with the average for the preceding year; and that the average number of persons receiving out-door relief was 35,022, or 445 more than the corresponding number for 1916.

THE WEATHER.

The following information has been extracted from returns of Meteorological Observations taken in the City of Dublin, and published in the monthly editions of the "Dublin Journal of Medical Science," from March, 1917, to February, 1918, by Sir John W. Moore, M.A., M.D., D.PH., DUB.; D.SC., OXON.; F.R.C.P.I., F.R.MET. SOC., D.L., Hon. Physician in Ordinary to His Majesty the King in Ireland.

The mean Atmospherical Pressure has been obtained from daily readings of the barometer at 9 A.M. and 9 P.M., corrected and reduced to 32° Fahrenheit at the mean sea level. The Mean Temperature values have been deduced from the daily maximal and minimal readings of the thermometer in the shade. The Rainfall is that measured daily at 9 A.M. A *rainy day* is one on which at least ·01 inch of rain falls within the twenty-four hours from 9 A.M. to 9 A.M.

The *Mean Height of the Barometer* during the year 1917 was 29·970 inches. The highest observed reading was 30·638 inches at 9 P.M. on April 25th. The lowest observed reading was 28·800 inches at 2 A.M. on August 28th. The extreme range of atmospherical pressure was 1·838 inches, as compared with 2·010 inches in 1916.

The *Mean Temperature* of the air for the year was 48·8°. The highest reading was 75·5° on July 13th, and the lowest reading was 20·1° on February 6th. The average mean temperature for the twenty years, 1897–1916, was 50·1°.

Rain fell on 200 days, including snow or sleet on 31 days and hail on 39 days. The average annual number of rainy days in the years 1897-1916 was 203. The total rainfall measured 29·034 inches, compared with an average of 28·576 inches in the twenty years, 1897-1916. During the first half of 1917 (January to June, inclusive) the rainfall was 11·460 inches on 88 days; during the second half (July to December, inclusive) 17·574 inches fell on 112 days.

Reports on the Weather throughout Ireland during each quarter of the year 1917, as furnished by the Meteorological Office, are published in my Quarterly Returns of Marriages, Births, and Deaths for that year.

I have the honour to be,

Your Excellency's faithful Servant,

WILLIAM J. THOMPSON,

Registrar-General.

GENERAL REGISTER OFFICE,

CHARLEMONT HOUSE,

DUBLIN, 12*th July*, 1918

NOTE.—This Table has been constructed for the years 1843 to 1846—By taking the English average birth-rate of 1 in 31, and death-rate of 1 in 45, and deducting the annual emigration from Ireland according to the returns received from the Emigration Commissioners in England.

1847 to 1851—The English birth-rate, as above, was used, deducting the number of deaths and the number of emigrants in each year as given in the Irish Census Reports of 1851 : an allowance proportioned to the number of recorded deaths and the number of emigrants being made in each year for the excess of the number thus arrived at for 1851 over the actual population according to the Census of that year.

1852 to 1871—The English birth and death-rates, as above, were used, deducting the number of emigrants, according to the returns obtained by the Registrar-General for Ireland, and allowing for excess over Census numbers for 1861 and 1871, as explained for the last period.

1872 to 1914—By adding the births registered in each year to the estimated population for the previous year, deducting the deaths and the number of emigrants, and adjusting the results for the years 1872-81, 1882-91, 1892-1901, and 1902-1911, to allow for the discrepancy between the number thus arrived at for 1881, 1891, 1901, and 1911, respectively, and the population as shown by the Census in each of the years.

1915–1917—The estimated population for 1915 has been computed as in 1914 with some additional adjustments with regard to the movements of the military. The population in 1915 has been adopted provisionally for 1916 and 1917.

AGES of the POPULATION in IRELAND according to the Census Returns of 1861, 1871, 1881, 1891, 1901, and
